

Django Documentation – Weavers – Group 8 - Knit

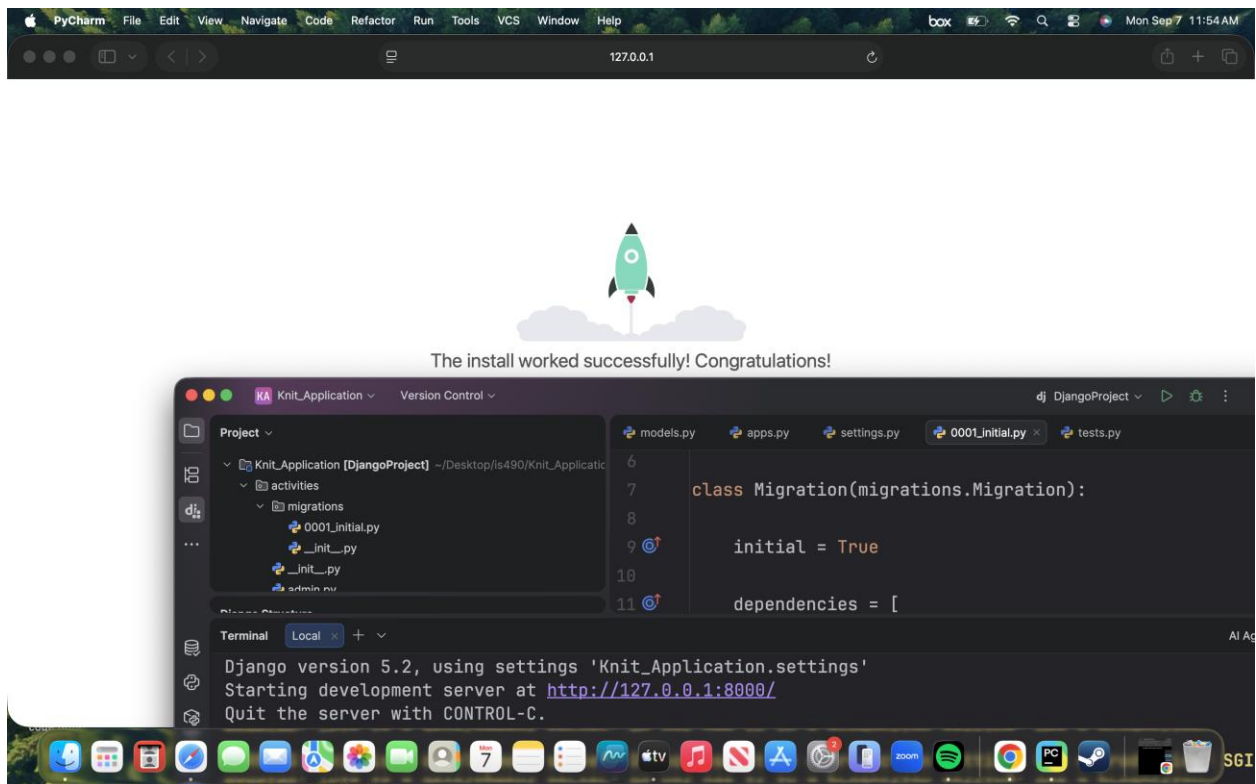

django-admin startproject Knit_Applications

We choose to name our django project Knit_Application. We selected this name to ensure the clarity of the project.

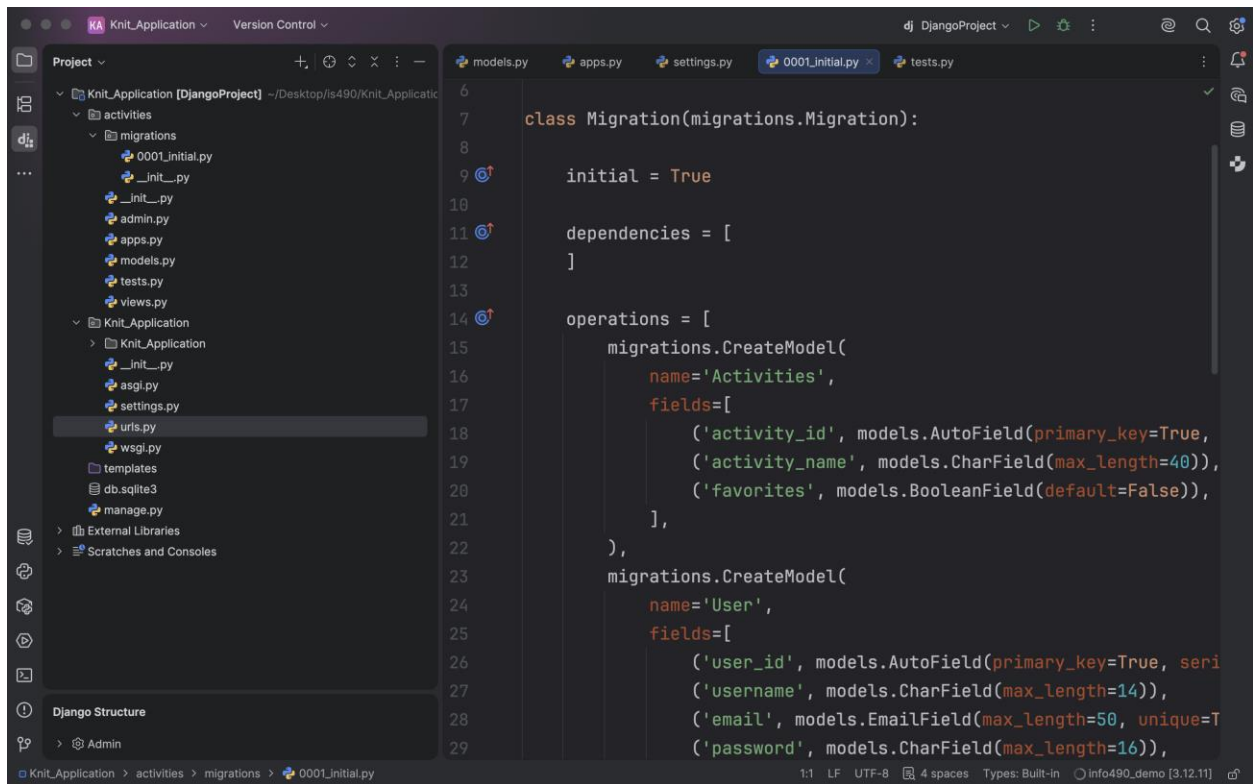

django-admin startapp activities

We choose to name our django app activities. The activities page is the core identity of the app; thus, we felt it was important to highlight it.

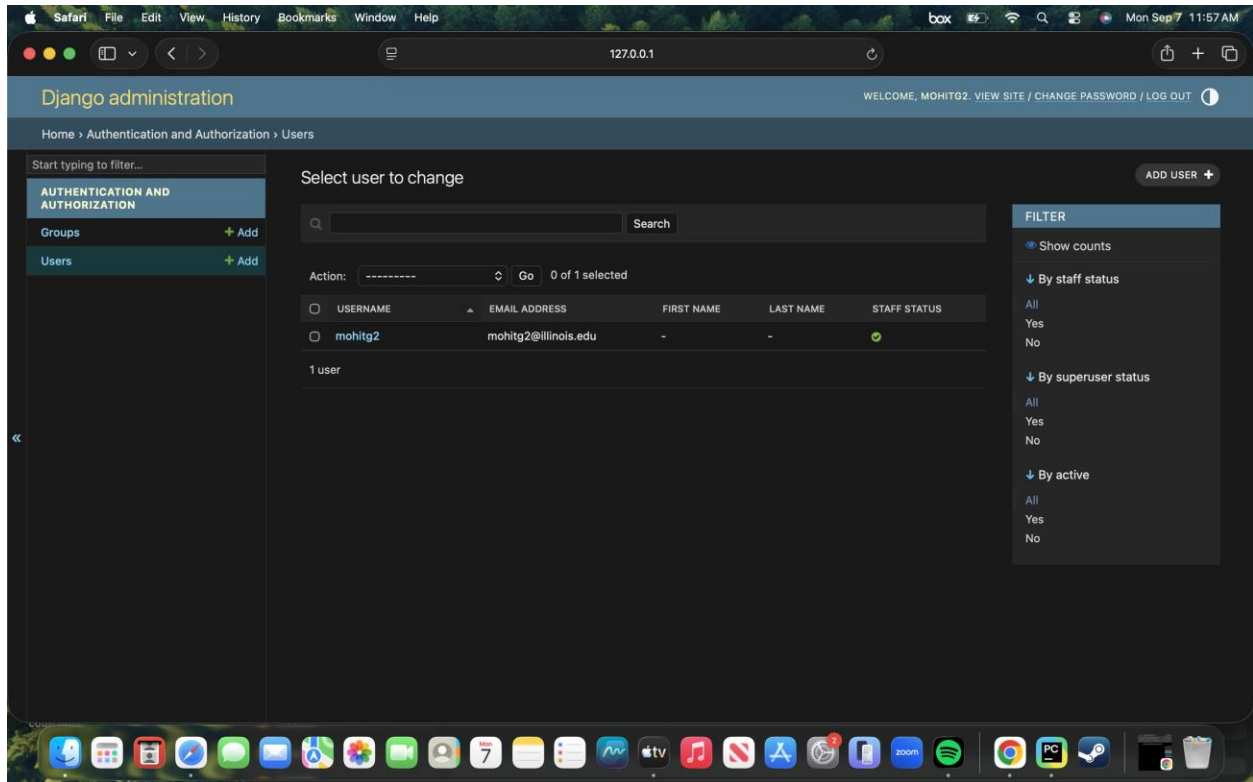

Proof of running server:

Proof of successful migrations and db.sqlite3:

Proof of successful superuser creation – mohit2g (uiuc12345):

Meta ordering:

The screenshot shows a code editor with a project named 'Knit_Application' [DjangoProject] located at ~/Desktop/is490/Knit_Application. The project structure includes a folder 'activities' containing 'migrations' and several Python files: '0001_initial.py', '__init__.py', 'admin.py', 'apps.py', 'models.py' (selected), 'tests.py', and 'views.py'. Below the project structure is a 'Django Structure' section. The main editor window displays the content of 'models.py', which defines two Django models: 'User' and 'Activities'. The 'User' model has fields for 'email' and 'password'. The 'Activities' model has fields for 'activity_id', 'activity_name', and 'favorites', and a 'Meta' class with 'ordering = ['activity_name']'. The terminal at the bottom shows the output of running 'django runserver', indicating the development server is running at http://127.0.0.1:8000/.

```
class User(models.Model): 3 usages
    email = models.EmailField(max_length=50, unique=True)
    password = models.CharField(max_length=16)

class Activities(models.Model): 2 usages
    activity_id = models.AutoField(primary_key=True) # one to many
    activity_name = models.CharField(max_length=40, unique=True) #
    favorites = models.BooleanField(default=False)

    class Meta:
        ordering = ['activity_name']
```

September 07, 2026 - 17:07:48
Django version 5.2, using settings 'Knit_Application.settings'
Starting development server at <http://127.0.0.1:8000/>
Quit the server with CONTROL-C.

WARNING: This is a development server. Do not use it in a production setting. Use a production WSGI or ASGI server instead.
For more information on production servers see: <https://docs.djangoproject.com/en/5.2/howto/deployment/>

With this ordering, activities will be organized in the standard alphabetical order

We selected cascade=True to prevent orphaned data points, simplify the models.

It is also important to note the unique=True constraint. There should be 1 of each hobby!

The screenshot shows the Django administration interface. The top navigation bar includes the title "Django administration" and the user "WELCOME, MOHITG2" with a "VIEW SITE" link. The breadcrumb trail is "Home > Activities > Activitiess > Add activities". The left sidebar contains a search bar and two sections: "ACTIVITIES" with links for "Activitiess", "Notificationss", "Recent activitiess", and "Recommendationss", each with a "+ Add" button; and "AUTHENTICATION AND AUTHORIZATION" with links for "Groups" and "Users", each with a "+ Add" button. The main content area is titled "Add activities". It features a red error message: "Please correct the error below." and "Activities with this Activity name already exists." Below this, the "Activity name:" field contains the text "Running". There is also a checkbox for "Favorites". At the bottom, there are three buttons: "SAVE", "Save and add another", and "Save and continue editing".

The user table also is set up to ONLY allow valid email formats such as henryjr2@illinois.edu

5 created activities organized by alphabetical order, auto create id.
